

MARCUS ALBRIGHT

Compliance & Risk Professional | Cybersecurity Analyst | Security Operations

United States • marcus.albright@gmail.com • [linkedin.com/in/marcus-a-69ab2989](https://www.linkedin.com/in/marcus-a-69ab2989) • github.com/techByMarcus • techbymarcus.github.io/aboutMarcus

PROFESSIONAL SUMMARY

Compliance and risk professional with 20+ years of direct, hands-on accountability in regulated financial services — including GLBA Safeguards, RESPA, TILA, and CFPB obligations — now applying that regulatory depth to information security. Brings structured triage judgment, audit-ready documentation discipline, and SLA-accountable escalation workflows directly to GRC and security operations roles. Building hands-on cybersecurity capability through the NIST Cybersecurity Framework, SIEM operations (Splunk, Wazuh), MITRE ATT&CK-mapped investigations, and a published GRC risk assessment of a regulated mortgage-lending workflow. CompTIA Security+ (SY0-701) in progress.

CORE COMPETENCIES

Governance, Risk & Compliance (GRC) • NIST Cybersecurity Framework • ISO/IEC 27001 Principles • Risk Assessment & Risk Registers • Controls Gap Analysis • Audit Readiness & Evidence Collection • Policy & Procedure Development • Third-Party / Vendor Risk Management • GLBA • RESPA • TILA • CFPB • PII Safeguarding • SIEM Operations (Splunk, Wazuh) • Alert Triage & Log Analysis • Incident Detection & Response • MITRE ATT&CK Framework • Cyber Kill Chain • Threat Hunting & IOC Extraction • Network Traffic Analysis (Wireshark) • SLA Management • Escalation Documentation

CYBERSECURITY PROJECTS & APPLIED TRAINING

GRC Risk Assessment — Mortgage Lending Workflow

2025 – Present

Self-Directed Project • Published: github.com/techByMarcus/grc-risk-assessment-financial-services

- Applied the NIST Cybersecurity Framework (CSF) to evaluate information security, compliance, and operational risks within a residential mortgage lending process — the exact regulatory environment I have operated in for two decades.
- Identified control gaps across all five NIST CSF functions (Identify, Protect, Detect, Respond, Recover) and documented risk-scored findings mapped to GLBA, RESPA, TILA, and CFPB obligations.
- Produced a risk register, risk ratings, and a prioritized remediation roadmap with audit-ready documentation — structured to the standard a compliance or examination team could act on directly.

SOC Incident Investigations — Hands-On Platform

2024 – Present

LetsDefend • Remote

- Completed 20+ structured SOC investigations across simulated enterprise environments: brute-force attacks, phishing campaigns, suspicious authentication events, and malware alerts.
- Performed SIEM-based alert triage, classifying alerts as true or false positives using log correlation, IP-reputation analysis, and behavioral indicators; documented findings consistent with Tier 1 SOC escalation standards.
- Applied MITRE ATT&CK and Cyber Kill Chain frameworks to map adversary tactics, techniques, and procedures (TTPs) and determine investigation depth and escalation path.
- Executed Splunk searches and correlation queries to surface IOCs, lateral-movement indicators, and authentication anomalies.

Incident Response & Threat Hunt Investigation

2025

Self-Directed Project • Published: github.com/techByMarcus/real-world-log-investigation

- Reconstructed a full attack timeline from authentication logs; extracted indicators of compromise (IOCs) and mapped adversary activity to MITRE ATT&CK tactics and techniques.
- Produced a comprehensive incident response report with executive summary, root-cause analysis, and remediation roadmap. Tools: Wazuh, VirusTotal, MITRE ATT&CK Navigator.

SIEM Log Analysis & Alert Triage Lab

2025

Self-Directed Project • Published: github.com/techByMarcus/security-audit-tool

- Deployed Wazuh SIEM for centralized monitoring; analyzed Windows Event Viewer, Sysmon, and Linux auth logs for brute-force, privilege-escalation, and persistence indicators.
- Built a Python-based automated security audit tool aligned to NIST CSF controls — produces risk-scored findings reports with remediation guidance.
- Performed Wireshark PCAP forensic analysis to identify DNS tunneling, C2 beaconing, and malware traffic patterns from packet captures.

PROFESSIONAL EXPERIENCE

Senior Loan Officer | Client Operations & Compliance

October 2025 – Present

The Loan Factory (NMLS #1503465) • Remote

- Manage end-to-end client operations in a regulated residential mortgage environment with direct accountability for compliance documentation, data integrity, and SLA performance.
- Maintain audit-ready loan files and client records in compliance with RESPA, TILA, and CFPB requirements; safeguard sensitive customer PII and financial data across CRM systems under GLBA Safeguards controls.
- Execute escalation and SLA-tracking procedures across the loan lifecycle — the same structured triage and handoff discipline applied in security operations workflows.

Branch Manager | Loan Originator | Client Operations & Compliance

2004 – 2025

Multiple Financial Services Organizations — Residential Mortgage Lending • United States

- Led branch loan production and day-to-day operations across two decades, with direct accountability for regulatory compliance, file accuracy, and SLA performance under TILA, RESPA, GLBA, and ECOA.
- Assessed borrower and file-level risk; identified and escalated exceptions and red flags prior to funding — applying the same root-cause and false-positive logic used in security alert triage.
- Safeguarded customer PII and financial data across CRM and origination systems under internal controls and GLBA Safeguards expectations; maintained audit-ready files for examination and investor review.
- Hired, trained, and supervised loan officers and support staff on compliance, data-handling, and documentation standards.

CERTIFICATIONS & TRAINING

- CompTIA Security+ (SY0-701) — In Progress
- ISC2 Certified in Cybersecurity (CC) — In Progress
- QuickStart Cybersecurity Bootcamp — University of Tennessee, Knoxville (May 2025)
- Risk Management & Credit Principles — New York Institute of Finance
- Network Defense Essentials (NDE) — EC-Council
- Ethical Hacking Essentials (EHE) — EC-Council
- SOC Analyst Path • MITRE ATT&CK for SOC Analysts • Cyber Kill Chain — LetsDefend
- Cloud Technical Essentials — Amazon Web Services
- IT Fundamentals (ITF+) — CompTIA • Technical Support Fundamentals — IBM
